total battery consulting

xEV Industry Insider Report

TABLE OF CONTENTS
April 2019 Edition

- Toyota Motors Corporation 2001-17 Toyota/ Lexus HEV Family
- Volkswagen / Audi / Porsche (1)
- Volkswagen / Audi / Porsche (2)
- Volkswagen / Audi / Porsche (3)
- Volkswagen / Audi / Porsche (4)
- General Motors
- 2011-17 Chevy Volt; 2014-16 Cadillac ELR; 2017 Cadillac CT6
- Ford Motor Company
- 2005-17 Ford HEV Family
- Nissan
- Renault
- Honda
- BMW Group
- BMW xEVs
- BMW xEV Sales
- 2014-17 BMW i3 EV
- Hyundai Motor Group
- 2011-17 Hyundai Sonata & 2017 Ioniq, 2011-17 Kia Optima & 2017 Niro
- Mitsubishi Motor Corporation (MMC)
- Fiat Chrysler Automobiles
- 2017 Chrysler Pacifica PHEV
- Daimler
- Daimler Battery Types
- Volvo Group
- 2013-16 Volvo V60 PHEV; 2016-17 Volvo XC90 PHEV; 2017 Volvo S90 PHEV
- PSA Group
- Tesla Motors
- Tesla Motors
- Tesla's Impact on Electric Vehicle Design
- Tesla's Impact of the EV/Battery Industry

II. Lithium-Ion Battery Technology for xEVs

1. Key Battery Design Parameters

- Historical xEV Battery Development
- xEV Battery Technology Overview
- The Lithium-Ion Cell
- Li-Ion Cell Stack
- Cell Design & Casing : Pouch, Cylindrical, or Prismatic
- Cell Casing: Cylindrical
- Cell Casing : Prismatic and Pouch
- Cathode Chemistry: Ni-Based
- Cathode: NMC is the Focus for Large-Cell EV Batteries
- Cathode Chemistry: Other
- Anode: Graphite-Based
- Status of Graphite
- Si-Blend Anode
- Electrolytes
- Separator
- Solid Electrolyte/Separator?
- xEV Battery Power and Energy Level vs. Applications
- xEV Battery Pack Energy Density vs. Power Level
- xEV Battery Cost vs. Energy
- Module Technology

2. Mild and Strong Hybrid Batteries

- **Requirements**
  - Batteries for Strong Hybrids
  - 2001-17 Toyota HEV NiMH: Battery Pack Parameters
  - HEV Li-Ion Cell Current Design Matrix
  - Li-Ion Prismatic Metal-Can Cells Involved in Production HEVs
  - Li-Ion HEV Cell Materials Cost
  - Li-Ion HEV 5-Ah Cell Price
  - Li-Ion HEV: Key Cost Components
- **Cell and Pack Design, and Cost**
  - 48V Mild Hybrids: Battery Requirements and Selection
  - 48V Battery Solutions
  - Audi 48V Battery System Requirements
  - 48V, 0.37-kWh Liquid-Cooled SDI Pack for Jeep Wrangler
  - LG Chem 9.8-Ah Pouch Cell for Mild Hybrids
  - 10-Ah MHEV Cell Price 2020
  - 48V MHEV, 2025 Cell Materials Cost
  - 48V MHEV, 2025 Cell Price
  - 48V Cell and Battery Design Evolution
  - Audi's 48V Battery System Requirement Evolution Forecast
  - 14V Micro-2 Hybrids: Energy-Storage Solutions
  - Micro-2 Hybrids: Energy-Storage Solutions (2)
  - Micro-2 Hybrids: Energy-Storage Solutions (3)
  - Low-Voltage Hybrid Li-Ion Cell Design

3. EV & PHEV Battery Technology

- **PHEV Battery Technology Evolution**
  - Battery Pack Capacity for PHEVs
  - PHEV Battery Pack – Specific Energy
  - PHEV Battery Pack – Capacity vs. Launch Year
  - PHEV Battery Pack – Specific Energy vs. Launch Year
  - PHEV Cell and Pack – 2017 Market
  - Mercedes PHEV Battery-Pack Parameters
  - PHEV-2 Roadmap
- **EV Cell and Battery Design, Energy & Power Density**
  - EV Pack Key Characteristics since 1996
  - Battery Packs for EVs vs. Launch Year
  - Li-Ion Cells Employed in EVs 2008-2017
  - Key Characteristics of EV Cells Utilized in EV Packs 2017
  - Battery Packs for EVs – Specific Energy vs. Launch Year
  - Specific Energy of EV Battery Packs
  - Cells Delivering 600Wh/liter are Being Qualified
  - VW's Aggressive Technology Roadmap
  - Li-Ion Cell Energy Density Evolution
  - Where is the improvement in energy density coming from?

- **Life and Safety**
  - EV & PHEV Battery Life
  - Tesla Battery Capacity versus Driven km (as published by Tesla Drivers Club)
  - Li-Ion Battery Safety
  - Safety at Module and Pack Levels
  - Safety: Key Issues
  - Safety Enhancement and its Cost
  - Fast Charge & Battery Design
  - Impact of Fast Charge on Cost and Energy Density
  - Fast-Charge Tesla Batteries: about 50% in 30 minutes

4. EV and PHEV Battery Cost

- **Cost of Materials**
  - Nickel Pricing
  - Class 1 Nickel Supply and Demand
  - Cobalt Pricing $/kg
  - Lithium Pricing
  - NMC (6,2,2) Cost Estimate
  - NCA (90,6,4) Cost 2018-2020
  - NCA (90, 06, 04) Cost 2025
  - 37-Ah PHEV Cell Materials Cost
  - 3.4-Ah 18650 Cell Materials Cost
  - 21700 Cell Materials Cost – 2020
  - 56-Ah EV Pouch Cell Materials Cost
- **Cell and Battery Cost**
  - 37-Ah PHEV Cell Price
  - Cell Price for a 44 Ah Prismatic PHEV cell (2020)
  - 3.4-Ah 18650 Cell Price, 2016
  - 56-Ah EV Pouch Cell Price, 2018
  - 21700 Cell Price, 2020
  - 65Ah Pouch Cell Price, 2020
  - 78Ah EV Pouch Cell Price Estimate, 2025
- **Cost Reduction Trajectory**
  - PHEV Battery Price Trends
  - VW's Aggressive (unrealistic?) Price Target for Cells and Packs
  - GM's Roadmap for EV Cell Pricing, Chevy Bolt
  - EV Battery Price Trends
  - Cost-Reduction Roadmaps—Issues
  - EV Battery Cost Estimate
  - xEV Battery Cost and Pricing

III. Battery Technology: Is there a Future Beyond Lithium Ion?

1. xEV Batteries' Desired Attributes and Characteristics of 2025 Li-Ion Batteries

- Automakers' Expectations for Key Performance Values of Battery-EV Li-Ion Cells
- Automakers' Expectations of 2025 Li Ion BEVs
- Fast-Pace Expansion History of Li-Ion Batteries
- Future Automotive Cell Requirements - Other Applications
- Direction of Automotive Li-Ion Battery Development
- So What is the BEV Cell Development Matrix?
- Automakers' EV-Battery Needs for Faster BEV Expansion Beyond 2028

2. Anode Opportunities: Silicon and Metallic Lithium

- Silicon-based Anodes
- Silicon Anode Pre-Lithiation
- Metallic Lithium Anode
- 1975-1977, Li/TiS2 and LiAl/TiS2 Rechargeable Cells - EXXON
- 1986-1990: Li/MoS2 Rechargeable Cells – Moli Energy
- Valence Technology 1994 Li/'Wet' Polymer/VOx Cell Phone Cells
- Li-Metal Rechargeable Batteries
- Li-Metal Anode Cost and Processing
- Lithium Foil Pricing
- Metallic Li Anode – The Electrolyte Challenge

3. Solid Electrolyte: Promise and Challenges

- Solid Electrolyte for Lithium-Metal Rechargeable Batteries
- Solid Electrolytes – High-Level View
- Challenges of Solid Electrolytes in all Solid-State Li-Metal Cells
- Solid-State Batteries: Overview
- Many Electrolyte Families Under Development
- Limitations of Solid Electrolytes
- Key Characteristics of Contending Solid Electrolytes
- Solid Polymer Electrolytes 'Dry' (SPE) and 'Gels'
- Ionic Conductivity of Inorganic Solid Electrolytes
- The Lithium Protective Layer: Status and Challenges
- The Lithium Protective-Layer Approach
- Protected Li Metal Anodes

4. Li/SE versus C-Gr/LE; Energy Density and Cost

- Li-NMC: the Most Promising of the 'Future Technologies
- Volumetric Energy Density – Li-NMC versus Gr-NMC Cell Design Matrix
- Volumetric Energy Density – Li/NMC versus Gr-NMC Cells
- Li-NMC: Can we achieve cost parity with Gr-NMC?
- Li/NMC versus Gr-Si/NMC

5. Cathode Development: Is There a Future Beyond High-Nickel NMC?

- Li/Air or Li/Sulfur Chemistries – Volumetric Energy Density
- Li Ion versus Li/S – Battery Requirement Spider Diagram
- New Cathodes

6. Future EV Battery Technology Synopsis

- Beyond Li Ion before 2030?
- CONCLUSIONS: Beyond Li Ion for Mass-Market EVs?
- Conclusions: Post-Li-Ion Opportunity
- What is the Automakers' True Evaluation of Post Li Ion for EVs? Hype or Real Promise?

IV. xEV Battery Market Forecast to 2025

1. xEV Battery Market Overview

- xEV Battery Market Overview
- 2017 Automotive Li-Ion Battery Market
- 2018 Automotive Li-Ion Battery Market
- xEV Battery Pack Business
- 2020 Automotive Li-Ion Battery Market
- xEV Li-Ion Battery Market 2020
- 2025 Automotive Li-Ion Battery Market

2. Mild and Strong Hybrids

- Strong HEV OEM/Supplier Relationships
- Mild HEV OEM/Supplier Relationships
- HEV Battery-Pack Market
- Li-Ion HEV Battery Module Market

3. EVs and PHEV

- PHEV OEM/Supplier Relationships
- PHEV Battery Cell Market by Producer
- EV OEM/Supplier Relationships
- EV Battery Cell Market by Producer
- Combined EV & PHEV Cell Market by Producer
- xEV Battery Shipments by Chinese Producer, MWh
- Automotive Li-Ion Battery Business – 2025 Base Case
- 2030 xEV Battery Business – Base Case

4. Demand for Materials

- HEV Cell Materials Demand 2020
- PHEV-EV Cell Materials Demand 2020
- xEV 2020 Key Cell Materials
- 2025 xEV Battery Materials Demand
- xEV 2025 Key Raw Materials Demand Forecast

5. Directions of Individual Cell Makers

- Panasonic
- LG Chem Key Product
- LG Chem Cells and Packs
- LG Chem EV Cells
- LG Chem Cells and Pack – 2017 Chrysler Pacifica PHEV
- LG Chem Cells and Packs for Volvo PHEVs
- LG Chem – PHEV Battery Cells
- LG Chem – Other
- Samsung SDI
- CATL
- BYD
- Chinese Market – Battery Makers
- SK Innovation
- AESC Advanced Energy Supply Corporation
- GS Yuasa Group
- Toshiba
- Hitachi Vehicle Energy
- A123 Systems
- Johnson Controls

V. Appendix

1. Levels of Vehicle Hybridization

- Levels of Vehicle Hybridization/Electrification
- Key Hybrid Functions
- Which level of electrification?
- Micro-1 Hybrids (Stop/Start)
- Micro-2 Hybrids
- 48V Mild Hybrids
- 100-140V Mild Hybrids
- Strong Hybrids
- Plug-in Hybrids
- History of EV Battery Development
- Electric Vehicles
- Fuel-Cell Vehicles
- Heavy-Duty Vehicles

2. Lead-Acid and NiMH HEV Batteries and Ultracapacitors

- Enhanced Flooded Lead-Acid Battery Design (Exide)
- Valve-Regulated Lead Acid
- Lead Acid in Future Automotive
- EC Capacitors
- Nickel Metal Hydride HEV Cells
- Commercial Status of NiMH
- Lead Acid Producers – U.S. & Europe
- Lead Acid Producers – Japan
- NiMH producers Primearth EV Energy
